The invenueseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
Drosophila melanogaster polypeptide SEQ ID NO 14751.

                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signaliling cell-rell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;
                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 14751;
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; ABL06756

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RAR REPLICATION.

CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the varieties polyprotein, commonly with asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1.

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED E LIEOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN MAND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX (

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sensitive protein 309) (mus309 or blm or CG6920.
                                                                                                                                                                                                                           FUNCTION: Participates in DNA replication and may participate in repair. Exhibits a magnesium dependent ATP-dependent DNA-helicase activity that unwinds single- and double-stranded DNA in a 3'-5' direction (By similarity).
SUBCELLULAR LOCATION: Nuclear (By similarity).
SUBCELLULAR LOCATION: Nuclear (By similarity).
SIMILARITY: BELONGS TO THE HELICASE FAMILY. RECQ SUBFAMILY.
SIMILARITY: CONTAINS 1 HRDC DOMAIN.
